1. Introduction

India has experienced rapid industrial growth in last few years. Maharashtra is one of the most industrialised states in the country. The state has identified industrial sectors like auto, engineering, chemical, electronics and textile as focus sectors. Industrial processes and activities consume materials and resources for manufacturing products generating emissions, effluents and solid wastes. Rise in growth in industrial activities is leading to manifold impacts to the environment. This environmental pollution is a wide reaching problem and if not controlled to certain tolerable levels, it is likely to influence the human health too. Long term exposure to the polluted air and water causes chronic health problems. Hence, scientists are exploring the quantum of pollution load as well as to device certain strategies and technologies so that our sustainable development would not be jeopardized otherwise our long cherished dream of establishing eco-socialism on this watery planet could not come true.

The extent of pollution varies with the size of the industry, the nature of the industry, the type of products used and produced etc. In view of this, Central Pollution Control Board (CPCB) has evolved the concept of Comprehensive Environmental Pollution Index (CEPI) during 2009-10 as a tool for comprehensive environmental assessment of prominent industrial clusters and formulation of remedial Action Plans for the identified critically polluted areas. The index captures the various dimensions of environment including air, water and land. Comprehensive Environmental Pollution Index (CEPI), which is a rational number to characterize the environmental quality at a given location following the algorithm of source, pathway and receptor have been developed. Later-on proposals were received from the SPCBs, State Governments, and Industrial Associations and concerned Stake-holders for revisiting the criteria of assessment under CEPI concept. After careful examination and consideration of the suggestions of concerned stake-holders, it was decided to prepare the revised concept of CEPI by eliminating the subjective factors but retaining the factors which can be measured precisely. Hence, revised concept came into existence, which is termed as Revised CEPI Version 2016.

The present report is also based on the revised CEPI version 2016. The results of the application of the Comprehensive Environmental Pollution Index (CEPI) to selected industrial clusters or areas are presented in this report. The main objective of the study is to identify polluted industrial clusters or areas in order to take concerted action and to centrally monitor them at the national level to improve the current status of their environmental components such as air and water quality data, ecological damage, and visual environmental conditions. For the study, Central Pollution Control Board (CPCB) has selected a total of 88 industrial areas or clusters in consultation with the Ministry of Environment & Forests Government of India. Out of these, 5 critically polluted industrial clusters namely Tarapur, Dombivali, Navi Mumbai, Aurangabad and Chandrapur, are identified and 3 severely polluted industrial clusters namely Pimpri-chinchwad, Nashik and Chembur from Maharashtra are added into this list.

In this report, CEPI study is based on the Navi Mumbai industrial area of Maharashtra state. Navi Mumbai industrial estate was established in 1963 which is often known as TTC MIDC Estate. The Estate is located along the Thane-Belapur Road towards Northern side of road and total area of the industrial estate is 27km^2. There are about 2200 industrial units of various category engaged in the manufacture of Chemicals, Dyes, Dye-intermediates, Bulk drugs, Pharmaceuticals, Textile auxiliaries, Pesticides, Petrochemicals, Textile processors, Engineering units etc. Navi Mumbai is a developing town and so many construction activities are going on. Hence, besides the industries, transport, loading, unloading and handling of agro products are other sources which are major contributors for pollution, especially air pollution.

Critically Polluted Areas: Monitoring, sampling, analysis of Stack, Ambient Air Quality, Surface Water, Ground Water, Waste Water

2. Scope of Work

The Scope of Work consisted of the following:

Monitoring, Sampling, Analysis for Stack, Ambient Air Quality, Surface Water, Waste Water, and Ground Water Quality for identified five Critically Polluted areas (CPAs) in Maharashtra i.e. **Chandrapur, Dombivli, Aurangabad, Navi Mumbai** and **Tarapur** and 3 Severely Polluted areas (SPAs) in Maharashtra i.e. **Chembur, Pimpri-Chinchwad** and **Nashik** as per standard methods.

- At each of the 5 CPAs and 3 SPAs, 24 hourly ambient air quality monitoring to be carried out.

- Representative samples for surface water quality, waste water quality and Ground Water quality to be collected from prominent surface and Ground Water bodies located in and around the clusters/areas.

- Submission of complete monitoring, sampling and analysis reports including the summary of the parameters exceeding the prescribed standards/norms for all the 5 CPAs and 3 SPAs.

- Submission of 3 copies of final report with photographs at prominent locations and the CD (soft copy) on completion of the project for every critically polluted and severely polluted area separately.

Monitoring, Sampling, Analysis for Stack, Ambient Air Quality, Surface Water, Waste Water and Ground Water Quality for Navi Mumbai:

- The sampling was carried out in 5 days at various locations i.e. from 11th June, 2018 to 15th June, 2018.

- In Navi Mumbai, a total of 7 Stack Monitoring Samples, 7 Ambient Air Quality Monitoring Samples, 5 Waste Water Samples and 4 Ground Water Samples were collected and analyzed.

2.1 Stack Emission Parameters

The Stack Emissions were analyzed with the following parameters:

1. Acid Mist

2. Ammonia

3. Carbon Monoxide

4. Chlorine

5. Fluoride(gaseous)

6. Fluoride (particulate)

7. Hydrogen Chloride

8. Hydrogen Sulphide

9. Oxides of Nitrogen

Navi Mumbai   6

10. Oxygen

11. Polyaromatic Hydrocarbons (Particulate)

12. Suspended Particulate Matter

13. Sulphur Dioxide

14. Benzene

15. Toluene

16. Xylene

17. Volatile Organic Compounds (VOCs)

2.2 Ambient Air Quality Parameters

The Ambient Air Quality was analyzed with the following parameters:

1. Sulphur Dioxide (SO_2)

2. Nitrogen Dioxide (NO_2)

3. Particulate Matter (PM10)

4. Particulate Matter (PM2.5)

5. Ozone (O_3)

6. Lead (Pb)

7. Carbon Monoxide (CO)

8. Ammonia (NH_3)

9. Benzene (C_6H_6)

10. Benzo (a) Pyrene (BaP) (Particulate Phase Only)

11. Arsenic (As)

12. Nickel (Ni)

2.3 Water/Waste Water Parameters

The Water/Waste Water was analyzed with the following parameters:

a. Prominent Surface Water bodies such as outfalls of CETPs, ETPs, treated effluent drainage, river, canal, ponds, lakes and other such water supply resources flowing through the area or flowing adjoining the CPA.

b. Ground Water Quality data of prominent Ground Water resources such as observation wells of Central Ground Water Board, drinking water wells, hand pumps, bore wells, hand pumps, bore wells and other such water supply resources located in the industrial cluster/area under consideration or in the peripheral areas.

Basic water quality parameters for surface water and ground water both are as follows:

i. **Simple Parameters:**

1. Sanitary Survey

2. General Appearance

3. Colour

4. Smell

5. Transparency

6. Ecological(Presence of animals like fish, insects) (Applicable to only surface water)

ii. **Regular Monitoring Parameters:**

7. pH

8. Oil & Grease

9. Suspended Solids

10. Dissolved Oxygen (% saturation) (Not applicable for Ground Waters)

11. Chemical Oxygen Demand

12. Biochemical Oxygen Demand

13. Electrical Conductivity

14. Nitrite-Nitrogen

15. Nitrate-Nitrogen

16. $(NO_2 + NO_3)$-Nitrogen

17. Free Ammonia

18. Total Residual Chlorine

19. Cyanide

20. Fluoride

21. Sulphide

22. Dissolved Phosphate

23. Sodium Absorption Ratio (SAR)

24. Total Coliforms (MPN/100 ml)

25. Faecal Coliforms (MPN/100 ml)

iii.   Special Parameters:

26. Total Phosphorous

27. Total Kjeldahl Nitrogen(TKN)

28. Total Ammonia (NH_4 +NH_3)-Nitrogen

29. Phenols

30. Surface Active Agents

31. Organo Chlorine Pesticides

32. Polynuclear aromatic hydrocarbons (PAH)

33. Polychlorinated Biphenyls (PCB)and Polychlorinated Terphenyls (PCT)

34. Zinc

35. Nickel

36. Copper

37. Hexavalent Chromium

38. Chromium (Total)

39. Arsenic (Total)

40. Lead

41. Cadmium

42. Mercury

43. Manganese

44. Iron

45. Vanadium

46. Selenium

47. Boron

iv. Bioassay (Zebra Fish) Test: For specified samples only.

2.4   Methodology followed in Sampling and Analysis

Industries, places and locations that have been chosen for the sampling are representative of the city/area. Sampling has been done at the potential polluted areas so as to arrive at the CEPI. This will further help the authorities to monitor the areas in order to improve the current status of their environmental components such as air and water quality data, ecological damage and visual environmental conditions. Methodology for sampling, preservation and analysis have been done according to the references incorporated. Methodology of various types of parameters is presented under following annexure:

1. Stack Emission Sampling and Analysis Methodology – **Annexure II**

2. Ambient Air Sampling and Analysis Methodology **- Annexure III**

3. Water/Wastewater Sampling and Analysis Methodology - **Annexure IV**

3. Result of Analysis:

Results of Analysis are tabulated below for Stack Emission Monitoring, Ambient Air Quality Monitoring, Waste Water Analysis and Water Analysis. These are followed by their respective graphical representation.

*Kindly note:

• NA specifies the sample is not analysed for the specific parameter.

• ND specifies that even though the sample was analysed for the parameter, it was not detected.

• BDL specifies that the result obtained is below detection limit.

Please Note: Industrial clusters observed with below detection limit parameters are NOT included into the graphs

3.1   Stack Emission:

Stack Emission Monitoring Results are compared against The Environment (Protection) Rules, 1986 General Emission Standard - Part D. As VOCs concentration is not detected in the samples, hence it is not shown in the graphs.

4.   Summary and Conclusions

Based on the study done, the results are summarised and concluded as follows:

4.1   Stack Emission Monitoring:

Seven different industries were selected for Stack monitoring. All the three parameters detected and analyzed in the samples are observed below the standard limits.

Particulate matter was observed in the range of Below Detection Limit (BDL i.e. $<10mg/Nm^3$) to 23 mg/Nm^3. Minimum is observed in RPG life Sciences Ltd. and maximum at Aarecee Innovations Pvt Ltd.

Sulphur dioxide concentration is observed maximum at Akash Fabrics (17.1mg/Nm^3) and minimum of BDL ($<5.0mg/Nm^3$) is observed among all the locations. Nitrogen dioxide is observed in the range of 12.6 to 25.2 mg/Nm^3.

All three parameters are observed below their standard limits, which signify that stack emissions are under control and not polluting the environment.

4.2   Ambient Air Quality Monitoring:

In the present study, seven ambient air quality monitoring stations were selected for sampling. They are (i) CETP (Thane-Belapur) (ii) Schlumberger Asia Services Ltd. (iii) Vashi STP Sector -18 (iv) Airoli IT Park (v) Lona IT Park (vi) Apar Industrial Ltd. (vii) Terna Medical College

The parameters monitored were studied as per the NAAQ standards. The variations of each parameter within the area under study are discussed below:

1. **Sulphur dioxide**: It is observed minimum at Airoli and Lona IT Park (6.19 µg/m^3) and maximum at CETP (6.39 µg/m^3), these values are quiet lower than the standard limit of NAAQS i.e. 80 µg/m^3.

2. **Nitrogen dioxide:** It is observed minimum at Terna Medical College (5.8 µg/m^3) and maximum at CETP and VAshi STP (7.12 µg/m^3). These values of nitrogen dioxide are also observed below the standard limit of 80 µg/m^3 at all the locations.

3. **Particulate Matter (PM$_{10}$)**: PM$_{10}$ is considered as one of the major causes of ambient air pollution. At all the sampled locations, all 7 samples are found to exceed the standard limit of 100µg/m^3. It is observed minimum at Terna Medical College (122 µg/m^3) and maximum at Schlumberger Asia Services Ltd. (239µg/m^3).

4. **Particulate Matter (PM$_{2.5}$)**: Like PM$_{10}$ it is also categorized as a probable carcinogen. However, its concentrations at all the 7 locations are observed below the standard limit of 60 µg/m^3. It is found in the range of 28 to 55 µg/m^3.

5. **Ozone (O$_3$)**: Concentration of ozone in all the samples is observed lower (below 19 µg/m^3) than its standard limit

6. **Lead (Pb)**: Concentration of Lead is also observed below standard limit in all the samples i.e. <0.02 µg/m^3

7. **Carbon monoxide (CO)**: It is observed below standard limit at all the locations i.e. in the range of 0.91 to 3.79 mg/m^3

8. **Ammonia (NH_3):** Concentration of ammonia is also observed very much lower than its standard limit (400 µg/m^3). It is observed below 40 µg/m^3.

9. **Benzene (C_6H_6):** Benzene is a known carcinogen, hence it is unsafe when exceeds the limit. Fortunately, all the samples under study are observed lower value than its standard limit of 5 µg/m^3, i.e. in the range of BDL (<1µg/m^3) to 4.38µg/m^3.

10. **Benzo(a)pyrene:** BaP is also considered as a critical pollutant hence lethal if exceeds the limits. The study shows that the concentration of BaP is below 0.2 ng/m^3 at all locations, which is quite lower value than its standard limit of 1ng/m^3.

11. **Arsenic:** Concentration of Arsenic at all the studied locations is found below the standard 6ng/m^3.

12. **Nickel:** Concentration of Nickel is also observed below the standard limit (20 ng/m^3), at all the studied locations of Navi Mumbai.

4.3 Waste water Quality Monitoring:

To understand the quality of treated effluent, samples were collected from following five industries - (i) Wonder Park (ii) Juinagar Railway Station (iii) Siements Nalla Airvali (iv) Alok Nalla Vashi (v) CBD Nallah

1. **Colour** (Hazen Units): Colour units are found below the acceptable standard.

2. **Odour**: odour of all the samples is found disagreeable.

3. **pH**: it is observed in between 6.77 and 7.64 which is well within the range.

4. **Suspended Solids**: Suspended solids of treated outlet water of all locations appeared to be clean, as suspended solids is observed below 100 mg/L.

5. **Chemical Oxygen Demand**: It is observed in the range of 10 to 80mg/L, which is quiet below the standard limit (250 mg/L).

6. **Biochemical Oxygen Demand**: BOD samples also show the same trend as COD samples. All the samples are observed to below the standard limit (30 mg/L). It is observed in the range of 4 to 28mg/L

7. **Sulphide**: Concentration of sulphide at all the locations is found below detection limit i.e. less than 0.025 mg/L.

8. **Total Ammonia**: All the samples are found below detection limit hence, very less than the standard limit of 5 mg/L.

9. **Total Kjeldahl Nitrogen**: It is observed in the range of 3.69 to 49.9mg/L, which is quiet below the standard limit (100 mg/L).

10. **Fish Bioassay**: Except CBD Nallah (50% fish survival), all other water samples exhibit 100% of fish survival.

11. **Heavy metals**: All the heavy metals are found below the standard limits in all the samples.

12. Other parameters like Free Ammonia, Total Residual Chlorine, Cyanide, Fluoride, Dissolved Phosphate, Phenolic compounds also meet the criteria as prescribed by CPCB.

4.4 Ground water Quality Monitoring:

Six samples were collected from 4 different locations namely: (i) Turbhe Village (ii) MSW TTC Area (iii) TTC WMA (iv) TTC Plot no. 142 MIDC. Parameters which are not included in ISO 10500:2012 are compared with WHO standards like BOD (6 mg/L) and COD (10 mg/ L).

1. **Colour** (Hazen Units): Colour units are below the acceptable standard.

2. **Odour**: odour of all the samples is found agreeable.

3. **Chemical Oxygen Demand:** All samples are found below the permissible standard limit of 10mg/L i.e in the range of BDL (<5mg/L) to 7mg/L.

4. **Biological Oxygen Demand:** BOD samples also follow the similar trend as COD. All samples are found below the permissible standard limit of 6mg/L i.e in the range of BDL (<1mg/L) to 2mg/L.

Following are the parameters which are compared with ISO 10500:2012 Drinking water specifications.

1. **Nitrite**: Values of Nitrite are observed below detection level.

2. **Nitrate:** Results of Nitrate are also observed below standard limit (45 mg/l), in the range of 0.87 to 3.45 mg/L.

3. **Residual Free Chlorine**: Values are below the acceptable standard.

4. **Total Ammonia**: All readings are found within the acceptable standard.

5. **Fluoride:** Values are below the acceptable standards, in the range of 0.36 at TTC WMA to 0.92mg/L at TTC Plot no. 142 MIDC.

6. **Sulphide:** All the readings of sulphide are observed below 0.025 mg/L.

7. **Sodium Absorption Ratio:** These values fit within range of water quality criteria of CPCB.

8. **Total Kjeldahl nitrogen:** All the water samples are observed below the standard limit i.e. in the range of 1.23 to 10.6 mg/L.

9. **Fish Bioassay**: All the water samples are observed with 100% fish survival at the end of 96h.

10. ***Boron:** Values are below the acceptable standards.

    (*CPCB Water Quality criteria for Irrigation, Industrial Cooling & Controlled Waste disposal).

11. **Surface Active Agents:** It exceeds the standard of drinking water.

12. **Metals:** All the metals are observed within the acceptable limits of drinking water standards.

13. **PAH & PCB** are also found below the acceptable limits.

5.   CEPI Score

Comprehensive Environmental Pollution Index (CEPI) is intended to act as early warning tool which helps in categorization of industrial clusters/areas in terms of priority of needing attention.

CPCB had evolved certain methodology to calculate CEPI, in which a score has been fixed for different environmental components based on the level of pollution. The scoring system involves an algorithm that takes into account the basic selection criteria. This approach is based on the basic hazard assessment logic that can be summarized as below.

Hazard = pollutant source, pathways, and receptor

CPCB has calculated CEPI for the identified critically polluted industrial clusters. It is calculated separately for air, water, and land. The basic framework and scoring system of the CEPI – based on three factors namely pollutant, pathway, and receptor – has been described further under this section.

To overcome the subjectivity, revised concept is proposed by eliminating the subjective factors as described in the previous section but retaining the factors which can be measured precisely.

I.   Revised concept is prepared by eliminating the debatable factors but retaining the factors which can be measured precisely.

II.   It is decided to develop the Comprehensive Environmental Pollution Index (CEPI) retaining the existing algorithm of Source, Pathway and Receptor.

III.   Health component was also retained in the revised concept in line with the suggestions of Secretary, MoEFCC during the meeting held in MoEF.

Outlines of revised CEPI 2016 criteria

The outlines of the revised CEPI criteria are as follows:

1. It is proposed to develop the Comprehensive Environmental Pollution Index (CEPI) based on Sources of pollution, real time observed values of the pollutants in the ambient air, surface water and ground water in & around the industrial cluster and health related statistics.

2. For assessment of the environmental quality of the area i.e. CEPI score, the concept of SNLF i.e. a surrogate number which represents the level of exposure (a function of percentage sample Exceedance & Exceedance Factor) shall be used.

3. Health component to be evaluated based on the health data available from major hospitals in the area was also retained in the revised concept.

The evaluation criterion of the revised CEPI version 2016 is described in the flowchart given below:
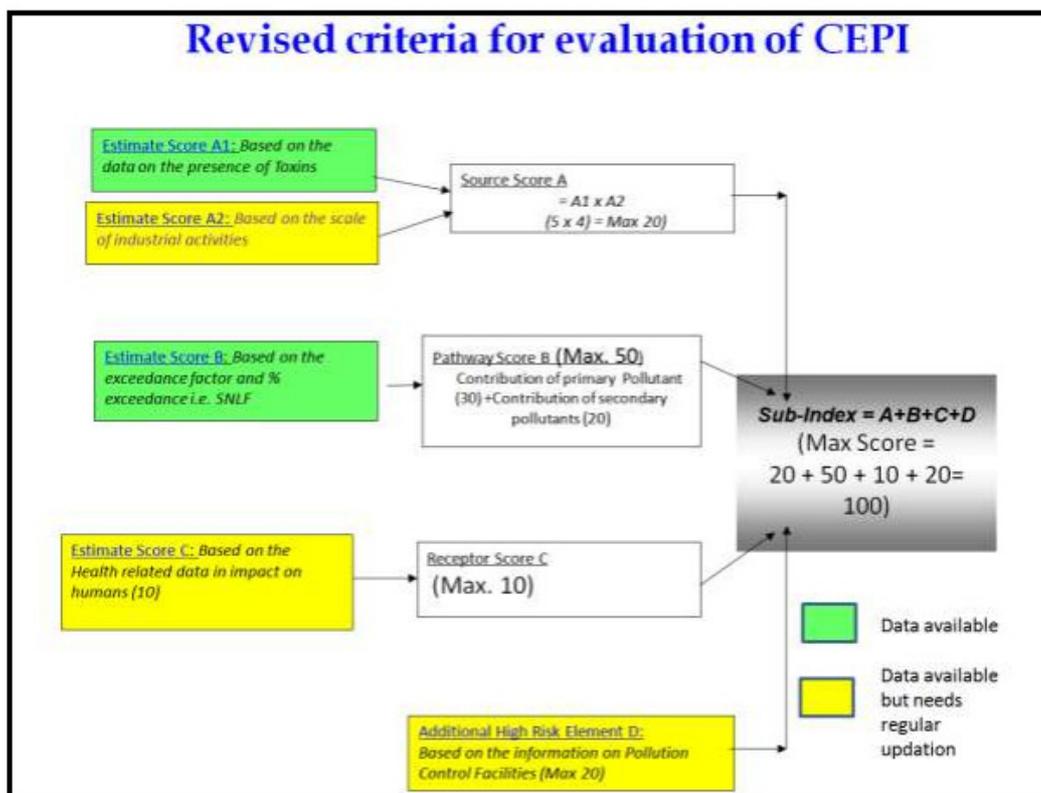

Here, health data collected for Receptor Score C is included in Annexure I

Based on Sub-Index Score (score of individual environmental component like air, water etc.):

- **Score more than 63:**   A Critical Level of Pollution in the respective level of environmental component

- **Score between 51-63:** Severe to critical level of pollution with reference to respective environmental component

Cut-off Score

- **Score 50:**   Severely Polluted Industrial Clusters/areas

- **Score 60:**   Critically Polluted Industrial Clusters/areas

Based on Aggregated CEPI Score (score includes sub-index score of all individual environmental components together):

- **Aggregated CEPI score >70:**   Critically polluted areas

- **Aggregated CEPI score between 60-70:** Severely polluted areas

Since the inception of the programme, MPCB has also formulated Action Plans to mitigate the environmental pollution problems for each of the 8 Critically Polluted Areas (CPAs) in Maharashtra. Based on available information, parameters selected and monitored in continuation with this, CEPI has been calculated and Short-Term Action Plan (STAP) as well as Long Term Action Plan (LTAP) was prepared in 2010.

Subsequently NAAQS 2009 came in force. List of parameters to be considered increased and expanded including more critical and hazardous pollutants like benzene, BaP, Metals, etc. existing in the environment. There was revision of standards (limiting values) as well. In this present report of 2016 prepared by MPCB, CEPI is calculated considering all these revised standards' limiting values, list of parameters and complete scope of monitoring.

5.1   Comparison of CEPI scores:

Below given Table shows aggregated CEPI of present report in comparison with:

1. CEPI score by CPCB in 2009

2. CEPI score 2013

3. CEPI score MPCB 2016

4. CEPI score MPCB February 2017

5. CEPI score MPCB June 2017

The result shows that CEPI score of present report is 41.78. The present study is the compilation of pre monsoon season, which also regulates the score value. This time CEPI is observed very less than the previous studies and it comes below the category of severely polluted areas.

Detailed results of Air, Water and Land are given below:

6. Conclusions

The Present study has been done according to the revised CEPI Version 2016. This is an attempt to check the characteristics and status of environment among the different industrial clusters of Navi Mumbai city. Revised CEPI version 2016 includes 2 major modifications in terms of evaluation of data: (1) It includes Contribution of primary as well as secondary pollutants under Factor B (Max Value 50) and (2) Exhaustive collection of health data of people residing in the vicinity of industrial clusters under study, Factor C (Max Value 10). This has changed the entire criteria of calculating CEPI as compared to the previous CEPI version and hence affected the overall CEPI score also. It shows that the concentration of pollutants in air, ground water and surface water is lowered down as compared to past studies, as most of the results are observed below their standards with an exception of one or two parameters.

At elevated levels, all the pollutants have adverse effects on human and environment. Health data collected from the nearby hospitals of the sampling locations shows cases related to respiratory problems mainly. Parameters of air sampling are observed within the standard limit except PM_{10} as compared to their standards. Among waste water samples, parameters like COD and BOD of all the samples are found below standard limit. Similarly, in ground water samples also, all the parameters are observed much below the permissible limits.

Moreover, the present CEPI score (41.78) of Comprehensive Environmental Pollution Index (CEPI) in the present study as compared to past few years study also reveals the fact that the environmental pollution in this city is substantially decreased over the period of times. To achieve this target, improvement in conventional practice and procedures adopted by the industries coupled with initiatives taken by Maharashtra Pollution Control Board played a major role. Although, a decrease in environmental pollution is observed, but still there is lot of scope to improve the environmental quality of the city, for which continuous efforts, strategies, planning and actions are required. Overall CEPI figures are comprised in the table below:

	A1	A2	A	B	C	D	CEPI
Air Index	2.5	4	10	20	0	10	**40**
Water Index	1.75	4	7	10	0	5	**22**
Land Index	1.75	4	7	1.5	0	5	**13.5**
						Aggregated CEPI	**41.782**

7.   Efforts taken for the reduction in pollution:

The regional office of Maharashtra pollution control board has taken various initiatives in reducing the CEPI Score of 77.39 of 2013 to 41.78 of 2018. Below mentioned are some of the efforts:

- About 17 industries have started using Natural Gas as fuel (PNG) since last 4 years. Gas Pipeline works started from 2011.

- Due to Change in Fuel Pattern the SO_2 Reduction: 576.70 T/A.

- All major polluting industries having their own full fledge ETP in their premises for treatment of effluent generated during activities. And then treated effluent is sent to CETP for further treatment and disposal in the Creek.

- The treated effluent of the industries is discharged into Common Effluent Treatment Plant (CETP) for further treatment and disposal and then discharged into TTC creek through closed pipeline at the point recommended by National Institute of Oceanography (NIO) nearly 3 km inside Vashi creek.

- All Large /Medium/ small scale industries has installed dust collectors and scrubbing systems as Air Pollution Control Devices.

- All the bulk mfg. units (12 nos) are being proposed to install VOC analyser including alarm system.

- About 57 major polluting industries are closed, namely – NOCIL Petrochemicals, Reliance Silicons, Standard Alkali (Chemical Division), Corromandal Fertilizers, Jaysynth Dyechem, Unique Chemicals, Cabbot India etc.

- Implementation of CEPI Action Plan by improvement of Environmental Pollution Control System has resulted in Reduction of Pollution Load. This has resulted in low pollution levels & hence improvement in CEPI status. Use of CNG for industrial and transportation already started

10.   Annexure

Annexure I Health related data in impact on humans

C: Receptor

Component C	
(Impact on Human Health)	
10	
Main - 10	
% increase in cases	**Marks**
<5%	**0**
5-10%	**5**
>10%	**10**

- % increase is evaluated based on the total no. of cases recorded during two consecutive years.

- For Air Environment, total no. of cases related to Asthma, Bronchitis, Cancer, Acute respiratory infections etc. are to be considered.

- For surface water/ ground water Environment, cases related to Gastroenteritis, Diarrhoea, renal (kidney) malfunction, cancer etc are to be considered.

- For the above evaluation, the previous 5 years records of 3-5 major hospitals of the area shall be considered.

Attached below health data collected for the region

Name of Hospital	Year	Diseases caused by Air pollution					Diseases caused by Water pollution				
		Asthma	Bronchitis	Pulmonary cancer	Mesothelioma (lung cancer)	Acute respiratory infections	Gastroenteritis	Typhoid	Diarrhea	Liver damage and even cancer (due to presence of chlorinated solvents in the polluted water)	Kidney damage (because of various harmful chemicals present in the polluted water)

Annexure V: National Ambient Air Quality Standards, 2009

The Gazette of India

EXTRAORDINARY PART III-Section 4 PUBLISHED BY AUTHORITY
NEW DELHI, WEDNESDAY, NOBEMBER 18, 2009 No. B-29016/20/90/PCI-I

National Ambient Air Quality Standards: Central Pollution Control Board

In exercise of the powers conferred by Sub-section (2) (h) of section 16 of the Air (Prevntion and Control of Pollution) Act, 1981 (Act No.14 of 1981), and in suppression of the Notification No(s). S.O.384(E), dated 11th April, 1994 and S.O.935(E), dated 14th October, 1998, the Central Pollution Control Board hereby notify the National Ambient Air Quality Standards with immediate effect, namely:

Sr. No.	Pollutant		Time Weighted Average	Concentration in Ambient Air		
				Industrial, Residential, Rural and Other Areas	Ecologically Sensitive Areas (Notified by Central Government)	Methods of Measurement
(1)	(2)		(3)	(4)	(5)	(6)
1	Sulphur Dioxide (SO$_2$)	µg/m^3	Annual *	50	20	– Improved West and Gaeke – Ultraviolet fluorescence
			24 hours **	80	80	
2	Nitrogen Dioxide (NO$_2$)	µg/m^3	Annual *	40	30	– Modified Jacob & Hochheiser (Na-Arsenite) – Chemilminescence
			24 hours **	80	80	
3	Particulate Matter (size less than 10 µm) or PM$_{10}$	µg/m^3	Annual *	60	60	– Gravimetric – TOEM – Beta attenuation
			24 hours **	100	100	
4	Particulate Matter (size less than 2.5 µm) or PM$_{2.5}$	µg/m^3	Annual *	40	40	– Gravimetric – TOEM – Beta attenuation
			24 hours **	60	60	
5	Ozone (O$_3$)	µg/m^3	8 hours **	100	100	– UV photometric – Chemiluminescence – Chemical Method
			1 hour **	180	180	
6	Lead (Pb)	µg/m^3	Annual *	0.50	0.50	– AAS/ICP method after sampling on EPM 2000 or equivalent filter paper – EDXRF using Teflon filter
			24 hours **	1.0	1.0	
7	Carbon Monoxide (CO)	mg/m^3	8 hours **	02	02	– Non Dispersive Infra Red (NDIR) spectroscopy
			1 hour **	04	04	
8	Ammonia (NH$_3$)	µg/m^3	Annual *	100	100	– Chemiluminescence – Indophenol blue method
			24 hours **	400	400	
9	Benzene (C$_6$H$_6$)	µg/m^3	Annual *	05	05	– Gas Chromatography based continuous analyzer – Adsorption and Desorption followed by GC analysis
10	Benzo (a) Pyrene (BaP) – particulate phase only,	ng/m^3	Annual *	01	01	– Solvent extraction followed by HPLC/GC analysis
11	Arsenic (As)	ng/m^3	Annual *	06	06	– AAS/ICP method after sampling on EPM 2000 or equivalent filter paper.
12	Nickel (Ni)	ng/m^3	Annual *	20	20	– AAS/ICP method after sampling on EPM 2000 or equivalent filter paper.

*   Annual arithmetic mean of minimum 104 measurements in a year at a particular site taken twice a week 24 hourly at uniform intervals.

**   24 hourly or 08 hourly monitored values, as applicable, shall be complied with 98% of the time in a year. 2 % of the time, they may exceed the limits but not on two consecutive days of monitoring.

Note: Whenever and wherever monitoring results on two consecutive days of monitoring exceed the limits specified above for the respective category, it shall be considered adequate reason to institute regular or continuous monitoring and further investigation.

SANT PRASAD GAUTAM, Chairman, Central Pollution Control Board [ADVT-III/4/184/09/Exty.]

Note: The notifications on National Ambient Air Quality Standards were published by the Central Pollution Control Board in the Gazette of India. Extraordinary vide notification No(s). S.O. 384(E), dated 11th April, 1994 and S.O. 935(E), dated 14th October,1998.

µg/m^3: micro-gram/m^3 i.e. 10^{-6}gm/m^3 ng/m^3 : nano-gram/m^3 i.e. 10^{-9}gm/m^3

Annexure VI: General Standards for Discharge of Environmental Pollutants, Part A: Effluents (The Environment (Protection) Rules, 1986, Schedule VI)

Sr.	Parameter	Standards			
		Inland surface Water	Public Sewers	Land for Irrigation	Marine Coastal Areas
1.	Colour and Odour	See Note 1	--	See Note I	See Note 1
2.	Suspended solids, mg/L, Max.	100	600	200	a. For process waste water - 100 b. For cooling water effluent- 10 percent above total Suspended mailer of influent cooling water.
3.	Particle size of Suspended solids	Shall pass 850 micron IS Sieve			a. Floatable solids, Max 3 mm b. Settleable solids Max 850 microns
4.	Dissolved solids (Inorganic), mg/L, Max.	2100	2100	2100	--
5.	pH value	5.5 -9.0	5.5 -9.0	5.5 -9.0	5.5-9.0

Sr.	Parameter	Standards			
		Inland surface Water	Public Sewers	Land for Irrigation	Marine Coastal Areas
6.	Temperature °C, Max	Shall not exceed 40 in any section of the stream within 15 mts. Downstream from the effluent outlet	45 at the point of discharge	--	45 at the point of discharge
7.	Oil and Grease, mg/L, Max	10	20	10	20
8.,	Total Residual chlorine, mg/L, Max	1.0	--	--	1.0
9.	Ammonical Nitrogen (as N), mg/L, Max	50	50	--	50
10.	Total Kjeldahl Nitrogen (as N), mg/L, Max.	100	--	--	100
11.	Free Ammonia (as NH_3), mg/L, Max	5.0	--	--	5.0
12.	Biochemical oxygen demand (5 days, at 20° c) mg/L, Max	30	350	100	100
13.	Chemical oxygen demand, mg/L, Max	250	--	--	250
14.	Arsenic (as As), mg/l, Max	0.2	0.2	0.2	0.2
15.	Mercury (as Hg). Mg/L, Max	0.01	0.01	--	0.01
16.	Lead (as Pb), mg/L, Max	0.1	1.0	-	1.0

Sr.	Parameter	Standards			
		Inland surface Water	Public Sewers	Land for Irrigation	Marine Coastal Areas
17.	Cadmium (as Cd), mg/L,	2.0	1.0	--	2.0
18.	Hexavalent Chromium (as Cr^{+6}) mg/L, Max	.1	2.0	--	1.0
19.	Total Chromium (as Cr), mg/L, Max	2.0	2.0	--	2.0
20.	Copper (as Cu), mg/L, Max.	3.0	3.0	--	3.0
21.	Zinc (as Zn), mg/L, Max.	5.0	15	0--	15
22	Selenium (as Se), mg/l, Max.	0.05	0.05	--	0.05
23	Nickel (as Ni), mg/l, Max.	3.0	3.0	--	5.0
24	Boron (as B), mg/l, Max.	2.0	2.0	2.0	--
25.	Percent Sodium, Max.	--	60	60	--
26.	Residual Sodium carbonate, mg/l, Max.	--	--	5.0	--
27.	Cyanide (as Cn), mg/L, Max.	0.2	2.0	0.2	0.2
28.	Chloride (as Cl), mg/L, Max.	1000	1000	600	--
29.	Fluoride (as F), mg/IL, Max.	2.0	15	--	15
30.	Dissolved Phosphate (as P), mg/L, Max.	5.0	--	--	--
31.	Sulphate (as SO_4), mg/L, Max.	1000	1000	1000	--

Sr.	Parameter	Standards			
		Inland surface Water	Public Sewers	Land for Irrigation	Marine Coastal Areas
32.	Sulphide (as S), mg/L, Max.	2.0	--	--	5.0
33.	Pesticides	Absent	Absent	Absent	Absent
34.	Phenolic Compounds (as C_6H_5OH), mg/L, Max.	1.0	5.0	--	5.0
35.	Radioactive materials:				
	a. Alpha emitters MC/ml., Max.	10^{-7}	10^{-7}	10^{-8}	10^{-7}
	b. Beta emitters µc/ml., Max	10^{-6}	10^{-6}	10^{-7}	10^{-6}

Annexure VII: Drinking Water Specification-IS 10500:2012

Sr.	Characteristic	Unit	Requirement (Acceptable Limit)	Permissible Limit in the Absence of Alternate Source
Table 1	Organoleptic and Physical Parameters			
1.	Colour	Hazen units	Max 5	Max 15
2.	Odour	-	Agreeable	Agreeable
3.	pH value	-	6.5-8.5	No relaxation
4.	Taste	-	Agreeable	Agreeable
5.	Turbidity	NTU	Max 1	Max 5
6.	Total dissolved solids	mg/L	Max 500	Max 2000
Table 2	General parameters concerning substances uBDLesirable in excessive amounts			
7.	Aluminium (as Al)	mg/L	Max 0.03	Max 0.2
8.	Ammonia (as total ammonia- N)	mg/L	Max 0.5	No relaxation
9.	Anionic detergents (as MBAS)	mg/L	Max 0.2	Max 1.0
10.	Barium (as Ba)	mg/L	Max 0.7	No relaxation
11.	Boron (as B)	mg/L	Max 0.5	Max 1.0
12.	Calcium (as Ca)	mg/L	Max 75	Max 200
13.	Chloramines (as Cl_2)	mg/L	Max 4.0	No relaxation
14.	Chlorides (as Cl)	mg/L	Max 250	Max 1000
15.	Copper (as Cu)	mg/L	Max 0.05	Max 1.5
16.	Fluoride (as F)	mg/L	Max 1.0	Max 1.5
17.	Free residual chlorine	mg/L	Min 0.2	Min 1

49.	Microscopic organisms such as algae,zooplanktons,flagellates,parasites and toxin producing organisms		Free from microscopic organisms	-

Annexure VIII: CPCB Water Quality Criteria:

Designated best use	Quality Class	Primary Water Quality Criteria
Drinking water source without conventional treatment but with chlorination	A	➢ Total coliform organisms (MPN*/100 ml) shall be 50 or less ➢ pH between 6.5 and 8.5 ➢ Dissolved Oxygen 6 mg/L or more, and ➢ Biochemical Oxygen Demand 2 mg/L or less
Outdoor bathing (organized)	B	➢ Total coliform organisms (MPN/100 ml) shall be 500 or less ➢ pH between 6.5 and 8.5 ➢ Dissolved Oxygen 5 mg/L or more, and ➢ Biochemical Oxygen Demand 3 mg/L or less
Drinking water source with conventional treatment	C	➢ Total coliform organisms (MPN/100ml) shall be 5000 or less ➢ pH between 6 and 9 ➢ Dissolved Oxygen 4 mg/L or more, and ➢ Biochemical Oxygen Demand 3 mg/L or less
Propagation of wildlife and fisheries	D	➢ pH between 6.5 and 8.5 ➢ Dissolved Oxygen 4 mg/L or more, and ➢ Free ammonia (as N) 1.2 mg/L or less
Irrigation, industrial cooling, and controlled disposal	E	➢ pH between 6.0 and 8.5 ➢ Electrical Conductivity less than 2250 micro mhos/cm, ➢ Sodium Absorption Ratio less than 26, ➢ and Boron less than 2 mg/l.
	Below E	➢ Not Meeting A, B, C, D & E Criteria

Annexure IX: Water Quality Parameters Requirements and Classification

Water quality parameters are classified into three categories, given in Table (i), (ii) and (iii) (Source: CPCB, 2002, "Water Quality Criteria and Goals", Monitoring of IBDLian National aquatic Resources Series: MINARS/17/2001-2002).

Table: Basic Water Quality Requirement and Classification (Surface Water + Ground Water)

i) Simple Parameters:

Sr.	Parameters	Requirement for Waters of Class		
		A-Excellent	**B-Desirable**	**C-Acceptable**
(i)	Sanitary Survey	Very Clean neighborhood and catchment	Reasonably clean neighborhood	Generally clean neighborhood
(ii)	General Appearance	No floating matter	No floating matter	No floating matter
(iii)	Colour	Absolutely Colourless	Almost colourless, very light shade if any	No colour of anthropogenic origin
(iv)	Smell	Odourless	Almost odourless	No unpleasant odour
(v)	Transparency	>1.0 depth	>0.5 to 0.1m depth	>0.2 to 0.5 m depth
(vi)	Ecological* (Presence of Animals)	Fish & Insects	Fish & Insects	Fish & Insects

* Applicable to only surface water

ii) Regular Monitoring Parameters:

Sr.	Parameters	Requirement for Waters of Class		
		A Excellent	**B-Desirable**	**C-Acceptable**
(i)	pH	7.0 to 8.5	6.5 to 9.0	6.5 to 9.0
(ii)	DO (% Saturation)	90-110	80-120	60-140
(iii)	BOD, mg/l	Below 2	Below 5	Below 8
(iv)	EC, µmhos/cm	<1000	<2250	<4000
(v)	(NO_2+NO_3)-Nitrogen, mg/l	<5	<10	<15

Sr.	Parameters	Requirement for Waters of Class		
		A Excellent	B-Desirable	C-Acceptable
(vi)	Suspended solid, mg/l	<25	<50	<100
(vii)	Fecal Coliform, MPN/ 100 ml	<20 per 100 ml	<200 per 100 ml	<2000 per 100 ml
(viii)	Bio-assay (Zebra Fish)	No death in 5 days	No death in 3 days	No death in 2 days

Note:

1. Dissolved Oxygen (DO) not applicable for Ground Waters.

2. Dissolved Oxygen in eutrophicated waters should include measurement for diurnal variation.

3. Suspended solid limit is applicable only during non-monsoon period.

4. Faecal Coliform values should meet for 90% times.

5. Static Bio-Assay method may be adopted.

iii)   Specific Parameters: (Only in case of need/apprehensions)

Sr.	Parameters	Requirement for Waters of Class		
		A- Excellent	B-Desirable	C-Acceptable
(i)	Total Phosphorous	<0.1 mg/l	<0.2 mg/l	<0.3 mg/l
(ii)	T.K.N	<1.0 mg/l	<2.0 mg/l	<3.0 mg/l
(iii)	Total Ammonia ($NH_4 + NH_3$)-Nitrogen	<0.5 mg/l	<1.0 mg/l	<1.5 mg/l
(iv)	Phenols	<2μg/l	<5μg/l	<10 μg/l
(v)	Surface Active Agents	<20 μg/l	<100μg/l	<200μg/l
(vi)	Organo Chlorine Pesticides	<0.05μg/l	<0.1μg/l	<0.2μg/l
(vii)	PAH	<0.05μg/l	<0.1 μg/l	<0.2 μg/l
(viii)	PCB and PCT	<0.01μg/l	<0.01μg/l	<0.02μg/l

Sr.	Parameters	Requirement for Waters of Class		
		A- Excellent	B-Desirable	C-Acceptable
(ix)	Zinc	<100μg/l	<200μg/l	<300 μg/l
(x)	Nickel	<50μg/l	<100μg/l	<200μg/l
(xi)	Copper	<20μg/l	<50μg/l	<100μg/l
(xii)	Chromium (Total)	<20μg/l	<50μg/l	<100μg/l
(xiii)	Arsenic (Total)	<20μg/l	<50 μg/l	<100 μg/l
(xiv)	Lead	<20μg/l	<50μg/l	<100μg/l
(xv)	Cadmium	<1.0μg/l	<2.5 μg/l	<5.0μg/l
(xvi)	Mercury	<0.2μg/l	<0.5μg/l	<1.0μg/l
